ECR #	Type	Module/Program	Requested Change:	Change Summary:
27637	Enhancement	Accounts Payable AP Invoice Screen	Manual check from MC button does not have invoice detail line filled out.	Update printoverflow flag to allow printing of invoice details on manual check stub.
27328	Enhancement	Task Management AVR Import Task Descriptions	Update the logic from ECR 27025 that concatenates the task description with the Serial and Last Read from the columns from the grid to make the Serial and Last Read show up in the Task Notes box instead of the description field. Put any default task notes for a standard task before the Serial and Last Read.	Change task building logic to insert serial and last read into notes for Non New Service tasks.
27726	Enhancement	Project Management Add Event for Phase Add	Add event list logic on Project Control when user adds a new phase.	Add new event (PHASE-ADD-XX, where xx is project type code) when phase is created from project screen.
27768	Enhancement	Reporting Add rtresource.resid to Job Summary	Add rtresource.resid to the cursor of the job summary report - jobsummary.frx.	Add Project Manager ResNo Code to PMRESNO if the project manager is a resource.
27555	Enhancement	Coil Tracking/Processing Alternate Coil Tag	Create a method for generating an alternate print format of the coil tag where the LF expression is replaced by the STK UNIT value. If item has the 'COILLIKE' attribute, puts the stocking unit from the item into the coil spot for the linear feet print.	Create custom version of CoilTag program that swaps out "Linear Feet" for the items stocking unit when printing coil tags if the item has the coil like attribute.
27697	Enhancement	Item Control (Inventory) Average Costing Disassembly	Run a cost average upon disassembly for items that use straight average cost.	Add logic to recalc avgcost on disassemble of stock item to make avgcost * qty on hand = the GL value (Old GL value - the disassembled value).

ECR #	Type	Module/Program	Requested Change:	Change Summary:
27782	Enhancement	Address Book Conn Info Meter History	Create a new tab for the Connection Information screen called "Meter History". Since there aren't currently any tabs on the Connection Information screen, the current info should be held on a new "Master" tab. The "Meter History" tab should have a grid with all historical information for any transaction done on the "Asset" tab of time entry for that address. The grid should have columns for: Status (Add, Read, Remove, Update, NoSerial) Serial Serial2 Description Meter Read Date NoSerial Note Default sort on the grid should be date desc. There should also be 2 fields above the grid for Current Read (last read entered) and Previous Read (last read before the Current Read).	Add tabs to Connection Info Screen. Add meter read history to second tab. Add Current and Last Reading. Update Meter Read Field to number type to allow decimal to align. Add current/prev meter (current is the most recent record), prev is most recent that is not the same). Current read is the most recent record, prev is second most recent record. change sort order to date descending.
27545	Enhancement	Warehouse Managment System Cycle Count	Create a setup option that would allow multiple counts of the same PackID during a cycle count, and would total each count together. With option enabled, user would see a message when they attempt to count an item that has already been counted stating 'Item has already been counted. Add to count?' Answering Yes would add the current count to the previous count. Answering No would abandon the current count. This option would be available on the scanner count prompt as well as the desktop	Add new setup option CCOUNTADD, that will allow the option to add to the existing count when using prompt 58 on the terminals. Add logic to pending count screen to allow addition of entered count if count already entered, but not submitted. Add logic to pending tab to handle cases where the new add qty is the same as the existing qty, so the add question will be saved.

ECR #	Type	Module/Program	Requested Change:	Change Summary:
			count process. This would be useful for customers who do not use bins, but have inventory in multiple locations, like a showroom and a back warehouse.	
27593	Enhancement	Item Control (Inventory) Item History Ending Qty	Add an extra column to the Item Master - History tab to display Ending Qty, similar to the Coil History screen Ending Qty column.	Add new EndQty to the History tab, fill out with ending qty. Only filled out if the ending date is >= today, or all is checked. Enable with setup option ICHISTSHOWEND. For more information, please visit the wiki entry at: http://www.abiscorp.com/adjwiki/How-to-view-the-Ending-Quantity-in-the-History-tab-of-Item-Master.ashx?NoRedirect=1
27806	Enhancement	Mail Reader Item Master - Copy Item	Reset avgcost and ofh avgcost to zero on item copy.	Reset avgcost and OHF avgcost to zero on item copy.
27332	Enhancement	Warehouse Managment System Load SE (Prompt 79)	Top level carton flag not checked when packing cartons into cartons, which will allow a top level carton to be packed into another carton.	Add logic to check for top level carton when adding inner cartons to outer carton during prompt 79 processing.
27727	Enhancement	MBS Integration MBS Phase Filter	Add a dropdown to the MBS import screen to allow users to select a phase, which will update all lines on the order to that phase. Add a column to the MBS match up screen that will allow user to manually change the phase on each line (phase will automatically default to whatever is selected on the import/process screen).	Add new phase dropdown to allow selecting phase for new SO/RFQ. Add Phase as column on Items Grid to allow each line to be set to a different phase. Default all phases to phase selected on first screen.

ECR #	Type	Module/Program	Requested Change:	Change Summary:
27783	Enhancement	Reporting Meter Change Out Report	Create a new Meter Change Out Report that will show the following information: Address District Current Meter Serial1 Current Meter Serial2 Previous Meter Serial1 Previous Meter Serial2 Previous Meter Last Read Transaction Date The report should have a district filter and a date range filter. It should only show records for an address where that address has both a remove and an add for the same day (representing a change out).	Create new meter change report. Add logic to find add entered after remove when processing records. This handles cases with multiple adds and removes on same day/same address. Wiki Link: http://www.abiscorp.com/adjwiki/Meter-Change-Out-Report.ashx?NoRedirect=1
27682	Enhancement	Item Control (Inventory) Mod Processor	The costs and weights are being wiped out when tabbing on the mod processor.	Update Wt% updates to work only within the original item set. Wt% is used to alter the cwqty during slit processes on transferred down items. Items Wt% should stay with original group (the sum of the group should be 100%, not the sum of all the transferred items).
27585	Enhancement	Order Entry On Order/Allocated Jump Screens	Increase input masks to handle 999,999,999.99 in upper grid.	Increase input masks in grid on qty and cwqty to 999,999,999.99.
27692	Enhancement	Purchase Orders PO Link to SO	Add audit logging to SO updates from PO Receipt processes.	Add logic to audit the cost update from the POREC processes
27729	Enhancement	Procurement PO Receipt	Items pushed to timesheet by PO Receipt do not always have the correct whse. These items then cannot be deleted from the timesheet and returned to inventory correctly.	Update PO to TS logic to use PO receipt whse as whse on timesheet line. Update logic to fill out Item History record with whse name, item and Task Customer.

ECR #	Type	Module/Program	Requested Change:	Change Summary:
27710	Enhancement	Purchase Orders PO Receipt Import	Add import logic to the old PO Receipt screen. Should function the same way as the import logic from the New PO Receipt screen.	Add PO Import logic to Old PO Receipt screen.
27725	Enhancement	Document Imaging PWO Attached Docs	Update the logic originally developed on ECR 24736 (PWOPRINTIMAGE) so that any document in the SO Doc Vault where the file name begins with the PWO department name will be printed along with the PWO print process. This will allow the feature to work with files submitted through Inbox Reader as along as the files start with the department name. For example, if the PWO Department is 'TRIM', all of the following Doc Vault files would print, because the first characters of the file name match : TRIM.JPG TRIMS.JPG TRIM-CUSTOM.JPG TRIM_20161231130011.JPG The following would not match: CUSTOMTRIM.JPG TIRM.JPG	Alter image search logic to find files that start with the dept instead of just being named the same as the dept. Include all matches in report. (JPG/PDF)
27717	Enhancement	Procurement Quick Buy Print Selected	Currently the print button on quick buy prints all items on the quick buy screen, regardless of what is selected by the check box. Create a set up option that will make the printer button print only the items that are checked.	Add new setup option (QBCHECKONLY), if selected then only print the selected items.
27621	Enhancement	Purchase Orders Quick PO Type	During a Quick PO (both day and night mode) create a way to not	Use POTYPE.log5 as upload required flag. If set, then upload is required

ECR #	Type	Module/Program	Requested Change:	Change Summary:
			require a doc vault attachment based on PO type chosen. For example, the subcontractor type, there is nothing to take a picture of, so an attached doc isn't needed.	to process a quick PO.
27703	Enhancement	Quoting RFQ Screen	Add logging to the LockStatus table. Disable all of the Gen/Update/Convert buttons when in edit mode.	Add logging to RFQ and PO/BPO header lock/unlock logic. Add checks for edit mode to Gen BPO, Update BPO, Convert Bid buttons on RFQ screen.
27634	Enhancement	Logistics (Shipping Events) SE Load Screen	Change Linked PWO and PO checks to only check lines where qty<>0.	Update pow and po checks to only look at lines where qty to ship is <> 0.
27706	Enhancement	Order Entry SO Master Data	Some SO Master records have a large O as the status, some have a little o as the status. All should be little o's.	Update CreateSO class to use lowercase o as status on SOMAST instead of uppercase O.
27683	Enhancement	Reporting Sales Tax Report	Add invoice type filter.	Add invoice status filter to report.
27767	Enhancement	Task Management Task Grid	Lock and complete from task grid do not fill out all details. Complete does not update editdate/user. Lock does not update lockeduser/date or edituser/date.	Update Lock and Complete logic to fill out edituser/date and lockeduser/date.
27766	Enhancement	Time and Materials Task Pricing Logic	System has issues pricing overtime lines where start and stop is in same hour (22:00 to 22:30) for example.	Update Overtime processing logic to handle cases where start and stop time are in same hour, and both minutes are less than or equal to 30.

ECR #	Type	Module/Program	Requested Change:	Change Summary:
27586	Enhancement	Task Management Task Screen	Add maxlen to task status remarks field to limit to 200 char input.	Add MaxLen to status remarks field (200 chars).
27690	Enhancement	Time and Materials Time Overlap Stop	Create a new security token that will allow being able to click OK on the pop up letting a user know that they have an overlapping time entry. Change the default logic to disallow clicking the OK button. Only users with the new security token checked should be allowed to save an overlapping time entry.	Add new TSCHKOVERLAP2 setup option. If set, then user must have TIMESHEET,S20 to be able to create an overlapping time entry. TSCHKOVERLAP and TSCHKOVERLAP2 both should not be set. Wiki Link: http://www.abiscorp.com/adjwiki/TSCHECKOVERLAP2.ashx?NoRedirect=1
27719	Enhancement	Time and Materials Timesheet Rounding	Create new function that will round a decimal hours value to a whole hours and minute value. Use on Weekly timesheet to round total values (week total of days, and bill code total).	Create new rtimetomin function that force decimal time to round to minute value. Use function on weekly timesheet to round total of days to minute value. Use on sum of billcode totals to force to minute value. Can be called from reports, use rtimetomin(value) to call. Returns to 5 decmial places, can be rounded if needed. round(rtimetomin(value),2) for example.
27231	Enhancement	Roll Former Integration Update to AMSADDCOIL	Make a change to the AMSADDCOIL setup option that looks to a rule for a total adjustment amount to not exceed. If the adjustment is greater than the amount stated in the rule, only adjust this footage to assign and leave the remainder unassigned. Store the total adjustment amount on the coil so that when the total adjusted amount hits the amount specified in the rule, no more adjustments are made. Update the AMS SQL view to remove the coil if	Max Add Value is stored in new AMSADDCOIL rule (num1 = ft allowed to add). Track amount added in new extraqty field in itemtrack. When sum of extraqty for given lot exceeds the value in the rule, no more will be added.

ECR #	Type	Module/Program	Requested Change:	Change Summary:
			the onhand is zero and the over usage is greater than the amount stored in the rule.	
27694	Enhancement	Coil Tracking/Processing Update to Coil Tags	Make a setup option that when enabled will print "Lot #" in the top left of the coil tag instead "Coil #".	Update coil tag label to show Lot # instead of Coil #
27812	Enhancement	Mail Reader Voiding Adjusted Invoices	Do not allow void of an invoice that was adjusted, but not paid.	Add logic to disallow voiding an invoice if paidamt or adjamt has a value filled out.
27732	Enhancement	Task Management WATERAPP Task Generation	Update the task generation logic from the WATERAPP screen to pull in the zone from the District (SoldTo) associated with the addresses selected.	Add logic to pull zone from soldto/shipto based on status of SOLDTOZONE setup option, and add to task when generating.
27611	Enhancement	Quoting Zero Price Quotes	Extend the zero price SO Type logic to the Quote Type rule.	Add log4 to RFQ Type rule (Zero Price), if this RFQ type is used, force list price and price to zero. Save line at zero price.

Total Number of Changes: 35
